ETEAM ASSESSMENT INFORMATION

and

MEDICO-LEGAL FEE SCHEDULE 2018 for RESIDENTS OF CANADA

The cognitive testing and psychiatric/medical evaluation form the core of the ETeam services. The ETeam also offers additional optional evaluations of specific symptom areas.

A legal referral is required. Please discuss the list of services with your lawyer or representative to decide which assessments are relevant to your clinical profile and objectives. Prior to booking your ETeam assessment, Dr. Stein will speak with you and your legal representative by phone to confirm that you have selected tests that are appropriate to your symptoms and objectives.

The ETeam is a group of independent professionals, each expert in his/her own field. Each team member assesses you independently and then discusses your results with the other team members to provide you with an integrated ETeam report summarizing the main test findings and an interpretation of findings in terms of diagnosis, functional capacity and management.

The ETeam assessment provides objective data from multiple, independent professional sources that may bring greater understanding and validate the types and extent of symptoms, abilities and impairments you experience. We provide a written summary of test findings as well as responses to the questions posed by your legal representative.

None of the fees for a medico-legal assessment are covered by any provincial health care plan or health insurance company. You and/or your legal representative are responsible for the full cost.

Depending on your symptoms and needs, further consultation and research may be recommended, which may incur additional fees. These will be discussed with you before proceeding. All team members work within the central Calgary area. For out of town clients, we attempt to arrange all appointments within a week timeframe. You are responsible for your own travel and accommodation arrangements and costs.

Disclaimer: We cannot predict or guarantee that the ETeam evaluations will identify a measurable impairment or diagnoses that you may expect.
